EDUCATION

VIT Bhopal University

Bachelor of Technology in Artificial Intelligence

Bhopal, Madhya Pradesh

May 2023 – May 2027 (Expected)

TECHNICAL SKILLS

Data Analysis & Visualization: Power BI, Microsoft Excel (Advanced), Pandas, NumPy, Matplotlib, Seaborn, Plotly, Streamlit

Programming & Querying: Python, SQL, DAX, Rust, Data Manipulation, ETL Processes

Machine Learning: Scikit-learn, Feature Engineering, Classification, Clustering, Time Series Analysis

LLM & Agentic AI: Prompt Engineering, Agentic AI, MCP Protocol, LLM, LangChain

Software Engineering: REST APIs, System Design

Databases: Oracle AI Vector DB, PostgreSQL, MySQL, Database Design & Optimization

Tools & Platforms: Jupyter Notebook, Git, Google Analytics

Core Competencies: Data Wrangling, Business Intelligence, KPI Development, Dashboard Creation, Reporting

EXPERIENCE

ML Intern

May 2026 – July 2026

STAQO

On-Site, Noida

- Built a REST API for intelligent project scheduling (87% accuracy) and an NLP-based complaint routing system for automated ticket assignment.
- Researched Share of Search as a market share indicator; developed Japki AI chatbot integrated into an LMS portal for Employee learning.

AI/ML Data Analysis Intern

Mar 2025 – Apr 2025

Shell-Edunet Foundation × AICTE Skills4Future

Remote

- Built automated ETL pipelines cutting data preparation time by 60%; developed ML models to forecast environmental metrics and sustainability KPIs.
- Created interactive dashboards for non-technical stakeholders using vector databases for efficient high-dimensional data retrieval.

PROJECTS

Athena AI – Autonomous HVAC Control Agent | Python, EnergyPlus, Qwen2.5 LLM, Streamlit | [Link]

- Built a closed-loop AI agent connecting a live EnergyPlus simulation with a local LLM (Qwen2.5) via a custom MCP tool-calling framework.
- Achieved 94.4% reduction in HVAC energy consumption (250,734 kWh saved) while maintaining 100% occupant thermal comfort across 676+ autonomous control timesteps.

Breast Cancer Classification using Neural Networks | Python, TensorFlow, Keras, Scikit-learn | [Link]

- Built a deep learning classifier on the Breast Cancer Wisconsin Diagnostic Dataset (569 samples, 30 features) achieving ~94% test accuracy.
- Engineered a full ML pipeline – standardized inputs, a Keras Sequential model (ReLU/Sigmoid), and Adam optimizer training.

ACHIEVEMENTS

Vultr Cloud Innovate Hackathon

- Developed a cloud-based analytics solution leveraging AI/ML for automated data processing and insight generation; presented data-driven recommendations to judges.

ArthNeeti 4.0 Economic Analysis

- Conducted statistical analysis and data modeling to evaluate economic policies using quantitative methods and visualization techniques.

CERTIFICATIONS

Shell-Edunet AICTE Skills4Future | Oracle AI Vector Search Professional | Oracle Generative AI Professional | Deep Learning in Ecological Studies | Python Basics | React JS
